## NOTES ON ELEMENTS

This document contains all the validation rules, which must be passed to enable a successful upload onto ROS.

These include for each attribute or element:

- Correct data formats
    - Maximum and minimum values where applicable
    - Dependent attributes or elements – other elements that must not be null or other attributes for which values must be returned in certain circumstances.

This document should be used as an aid to Form11 v22 **schema.xsd**. It details the data types and defaults for the 900 or so fields on the form.

### Please Note:

There are a number of nodes in the **<Form11>** node that are for internal processing only and are not input on the form. They are:

<SummaryCalculation>
<OtherCodes>
<Prepopulation>
<Note>

As the above have no impact on the Form they are not discussed further in this document

## SelfAssessmentIT

**Additional validation rule being applied to the fields on the SelfAssessmentIT element:**

A validation rule is being added to ensure that the returns uploaded have 'Column A' figures (attributes marked as **Revenue Calculation**** in the section below) that match the figures calculated for these fields.
A core principle of Full Self Assessment is that filers see the Revenue calculated figures for their return and either agree or disagree with these figures. This validation rule is being added to ensure that all filers see the Revenue calculated figures before completing their self assessment figures into 'Column B' (fields marked as **Self-Assessment ****** in the section below).

Here are the options available to retrieve 'Column A' figures from ROS:

1) If your software creates an XML file to be uploaded via the 'Upload Form(s) Completed Off-line' function on ROS, before uploading the file you should:
    a. Open the file using the ROS Offline application
    b. Navigate to the 'IT Self Assessment' panel. Column A figures will be populated.
    c. In order to save the Column A figures into your return, you must save your return on ROS Offline. In order to do this you must rectify any validation errors that are displayed. In order to save the return, select ***File -> Save*** on the top left hand corner of the application.
    d. You can then then open your return using your software product or submit it to Revenue via ROS.

2) Retrieve Column A figures from the ROS web-service using the **Form11/Calculate** operation. The ROS webservice performs two steps when it receives a return, firstly it validates the return, if a return passes validation is calculates the liability for that return and populates Column A. Therefore, in order to retrieve Column A figures from the web-service, a valid self-assessed return must be submitted. Here are the steps that must be followed before Column A figures will be returned:
    a. Leave the Column A figures blank.
    b. Fill in Column B figures (zero values will suffice).
    c. Disagree with the figures in Column A (@agreewithfigures="false")
    d. Provide "N/A" as the reason for disagreeing with Column A (@reasonfordisagreeing="N/A")
    e. Tick the 'I declare the above to be my Self Assessment to Income Tax..' field (@declareselfassessment="true")

See APPENDIX 3 – IT SELF ASSESSMENT for a sample response that the webservice will return when all other validation rules are passed but the Column A figures are incorrect.

### Note

This element is for internal use only.

## Prepopulation

The Prepopulation element has one attributes "cgtPaidPrepopDetails", "newcasemarker" and the following optional elements:

- Prepopulated
- PAYEDetails
- DSPDetails
- RCTDetails
- HRIDetails
- DAFMDetails
- RentIncDetails
- ePSWTDetails
- nLWTDetails

| Name | Type | Required Y/N | Description/*Validation* |
|---|---|---|---|
| cgtPaidPrepopDetails | Numeric | N | Value of the capital gain tax payment. |
| newcasemarker | Boolean | N | new case marker is present the customer has an additional twelve months to file the return. |

The Prepopulation element will be present when a prepopulated new Form11 return is dowloaded.

If the Prepopulation element is present when a Form11 is being submitted, it will have no effect and will be ignored.

**Please Note:** A Pre-populated Form 11 contains the following value in the "product" attribute: PRE-POPULATED FORM11. This should be overwritten with the software/software company name as returns containing this value will not be accepted. This is also included in the Form 11 element description above.

## Prepopulated

The Prepopulated element has no attributes. It consists of one or more PrepopulatedPanel elements.

The Prepopulated element will be present when a pre-populated new Form11 return is dowloaded.
It will contain a PrepopulatedPanel child element for every panel in the Form11, where each PrepopulatedPanel element indicates if the associated panel contains pre-populated data from the previous year's return.

In the case of the TradeIncome panel, which can contain up to 8 Trades, it will have an associated PrepopulatedPanel with panelname="TradeIncome" as an overall indicator of whether it contains any pre-populated Trades. Each Trades element contained within TradeIncome will have an associated PrepopulatedPanel with panelname="Trades-n", where n can be 1 to 8, indicating whether it was pre-populated.

If the Prepopulated element is present when a Form11 is being submitted, it will have no effect and will be ignored.

### *PrepopulatedPanel*

The PrepopulatedPanel element has the following attributes:

| Name | Type | Required Y/N | Description/*Validation* |
|---|---|---|---|
| panelname | String | Y | The name of the panel |
| populated | boolean | Y | Whether this panel contains prepopulated data from the previous year's return. |

### PAYEDetails

The PAYEDetails element has two attributes and zero up to two instances of the EmploymentSet elements, one for self (EmploymentSetSelf) and the other for spouse (EmploymentSetSpouse).

| Name | Type | Required Y/N | Description/*Validation* |
|---|---|---|---|
| **flatRateExpensesPrepopSelf** | Numeric | N | Value of flat rat expenses for self |
| **flatRateExpensesPrepopSpouse** | Numeric | N | Value of flat rat expenses for spouse |

The EmploymentSet element for self will be present when PAYE employment information for the assessable year is available from Revenue systems for the assessable spouse (self).
E.g. when a new pre-populated 2018 Form11 is returned, the employment information for 2018 for the assessable spouse is returned.

The EmploymentSet element for spouse will be present when PAYE employment information for the assessable year is available from Revenue systems for the non-assessable spouse (spouse).
E.g. when a new pre-populated 2018 Form11 is returned, the employment information for 2018 for the non-assessable spouse is returned.

If the either the self or spouse EmploymentSet element is present when a Form11 is being submitted, it will have no effect and will be ignored.

#### *EmploymentSet*

The EmploymentSet element has no attributes. It consists of zero or more Employment elements.
There will be an Employment element for every registered PAYE employment the party has on file on the Revenue systems.
