NOTES ON ELEMENTS

This document contains all the validation rules, which must be passed to enable a successful upload onto ROS.

These include for each attribute or element:

- Correct data formats
    - Maximum and minimum values where applicable
    - Dependent attributes or elements – other elements that must not be null or other attributes for which values must be returned in certain circumstances.

This document should be used as an aid to Form11 v22 **schema.xsd**. It details the data types and defaults for the 900 or so fields on the form.

Please Note:

There are a number of nodes in the **<Form11>** node that are for internal processing only and are not input on the form. They are:

<SummaryCalculation>
<OtherCodes>
<Prepopulation>
<Note>

As the above have no impact on the Form they are not discussed further in this document

SelfAssessmentIT

Additional validation rule being applied to the fields on the SelfAssessmentIT element:

A validation rule is being added to ensure that the returns uploaded have 'Column A' figures (attributes marked as **Revenue Calculation**** in the section below) that match the figures calculated for these fields.
A core principle of Full Self Assessment is that filers see the Revenue calculated figures for their return and either agree or disagree with these figures. This validation rule is being added to ensure that all filers see the Revenue calculated figures before completing their self assessment figures into 'Column B' (fields marked as **Self-Assessment **** in the section below).

Here are the options available to retrieve 'Column A' figures from ROS:
1) If your software creates an XML file to be uploaded via the 'Upload Form(s) Completed Off-line' function on ROS, before uploading the file you should:
   a. Open the file using the ROS Offline application
   b. Navigate to the 'IT Self Assessment' panel. Column A figures will be populated.
   c. In order to save the Column A figures into your return, you must save your return on ROS Offline. In order to do this you must rectify any validation errors that are displayed. In order to save the return, select *File -> Save* on the top left hand corner of the application.
   d. You can then then open your return using your software product or submit it to Revenue via ROS.

2) Retrieve Column A figures from the ROS web-service using the **Form11/Calculate** operation. The ROS webservice performs two steps when it receives a return, firstly it validates the return, if a return passes validation is calculates the liability for that return and populates Column A. Therefore, in order to retrieve Column A figures from the web-service, a valid self-assessed return must be submitted. Here are the steps that must be followed before Column A figures will be returned:
   a. Leave the Column A figures blank.
   b. Fill in Column B figures (zero values will suffice).
   c. Disagree with the figures in Column A (@agreewithfigures="false")
   d. Provide "N/A" as the reason for disagreeing with Column A (@reasonfordisagreeing="N/A")
   e. Tick the 'I declare the above to be my Self Assessment to Income Tax..' field (@declareselfassessment="true")

See <u>APPENDIX 3 – IT SELF ASSESSMENT</u> for a sample response that the webservice will return when all other validation rules are passed but the Column A figures are incorrect.
